

Field Studies Information Sheet

PEACE RIVER SITE C HYDRO PROJECT

BC Hydro is conducting property mapping field surveys in the Peace River area between Fort St. John and Hudson's Hope

BC Hydro will be conducting surveys to locate property boundaries and compile property maps around the Peace River area, between Fort St. John and Hudson's Hope, as part of the Stage 2 evaluation of the potential Site C project.

Land access will be required over public and private land in order to complete the survey work. BC Hydro will obtain permission from land owners and leaseholders before accessing private property.

Because much of the information currently known about the potential Site C project is almost 25 years old, information from new field studies is required to update engineering, environmental studies, and other technical work.

No decision has been made to build Site C. BC Hydro is taking a stage-by-stage approach to the evaluation of the potential project and is currently in Stage 2 – Project Definition and Consultation. This stage involves further project definition, including environmental, engineering and socio-economic studies, as well as public consultation.

Field study updates are available on the website at www.bchydro.com/sitec and in the Community Consultation Office: 9948 100th Avenue, Fort St. John.

SITE C FIELD STUDIES PROPERTY MAPPING: JULY-SEPT 2008

- Survey crews will access property by foot from public roads.
- Permission will be obtained from land owners and leaseholders before private property is accessed.
- Survey work will take place from July to September 2008.
