

NOTICE OF WORK

Low Level Aircraft Flight – Jackfish Lake Road Area: August 1, 2013

The Site C Clean Energy Project is currently undergoing a cooperative environmental assessment by the Canadian Environmental Assessment Agency and the B.C. Environmental Assessment Office, which includes a Joint Review Panel process. BC Hydro filed its Environmental Impact Statement (EIS) in January 2013 as part of this process. BC Hydro is continuing to conduct environmental and engineering field studies on and around the Peace River between the Williston Reservoir and the Alberta border to inform detailed project planning.

BC Hydro is conducting a low level aircraft flight on the south bank of the Peace River, around the Jackfish Lake Road area, between the Peace River and Chetwynd, and in the area of the transmission corridor right-of-way. The survey will involve using a low-flying aircraft that will fly slowly over the area to collect LiDAR data. The survey will take place on August 1 between the hours of 7:00 a.m. and 7:00 p.m.

Information compiled from the flight will be used in furthering detailed engineering designs for road upgrades.

BC Hydro will be notifying local and regional governments in the area directly impacted by the aircraft.

Field study updates are available at www.bchydro.com/sitec and in the Community Consultation offices in Fort St. John and Hudson's Hope.
