

## Site C Employment by Month: September 2016

Since construction started in summer 2015, BC Hydro's Site C Clean Energy Project has been creating jobs for British Columbians. In the coming months and years, many more jobs will be created as main civil works increases activities, and as major contracts get underway for turbines and generators, transmission and the generating station and spillways.

The table below shows the latest Site C employment numbers.<sup>1</sup> As with any construction project, the number of workers — and the proportion from any particular location — will vary month-to-month and also reflects the seasonal nature of construction work

### September 2016 Highlights

- The latest employment statistics show that there were 1,750 total workers on the Site C project in September 2016.
- Of the total workers, 1,392 were from British Columbia, or 80%.
- There were 600 workers on site from the Peace River Regional District — that's 45% of the construction and environmental contractor's workforce.

Site C Employment Statistics – September 2016				
	# of Total Workers	# of B.C. Primary Residents	% of B.C. Workers	# (and %) of Peace River Regional District Primary Residents
<b>Construction and Environmental and Non-Construction Contractors<sup>2</sup></b> <i>Excludes work performed outside of B.C. (e.g., Manufacturing)</i>	1,345	1,035	77%	600 (45%)
<b>Engineers and Project Team<sup>3</sup></b>	406	357	88%	---
<b>Total Workforce</b>	1,750	1,392	80%	---

*Employment numbers provided by Site C contractors and consultants are subject to revision. Data not received by project deadline may not be included in the above numbers.*

*During the month of September 2016, there were no workers working under the federal Temporary Foreign Worker Program from Construction and Environmental and Non-Construction Contractors. BC Hydro has contracted companies for major contracts, such as main civil works, who have substantial global expertise. In September, there were 22 management and professionals working on the project through the federal International Mobility Program.*

<sup>1</sup> Employment numbers are direct only and do not capture indirect or induced employment.

<sup>2</sup> Construction and Environmental and Non-Construction Contractors includes work performed on Site C dam site, transmission corridor, reservoir clearing area, public roadwork, worker accommodation and services.

<sup>3</sup> Project Team includes consultants, BC Hydro Construction Management and other offsite Site C project staff. An estimate is provided where possible if primary residency is not given.
