CLEAN
ENERGY PROJECT

PUBLIC NOTICE OF FIELD STUDY ACTIVITIES

BC Hydro is conducting environmental and engineering field studies on and around the Peace River, from Williston Reservoir to the Alberta border, as part of the planning and evaluation of the Site C Clean Energy Project (Site C).

Site C is currently early in the regulatory review phase, which will include an independent environmental assessment. During this stage, environmental and socio-economic studies will advance from baseline work to impact assessment, including identifying and evaluating potential options for mitigation. This stage will also include further opportunities for consultation and input by the public, stakeholders, Aboriginal groups and communities.

Environmental and engineering field studies to be completed during this stage may require access to private and Crown land. Permission and permits will be arranged before accessing private and Crown land.

For information about field studies underway, and to learn more about the Site C project, please visit www.bchydro.com/sitec.
