1.0 Background

The Site C Clean Energy Project is a hydroelectric dam and generating station under construction in northeast B.C. Construction started in July 2015 and the project will be in service in 2025. Site C will help meet future electricity needs by providing 1,100 megawatts of dependable capacity, and producing about 5,100 gigawatt hours of energy each year — enough to power the equivalent of 450,000 homes in B.C. per year. Once built, the project will be a source of clean, reliable and cost-effective electricity in B.C. for more than 100 years.

The key components of the project are:

- Access roads and a temporary construction bridge across the river, at the dam site.
- Worker accommodation at the dam site.
- Upgrades to 240, 269, 271 and Old Fort roads.
- The realignment of six segments of Highway 29.
- Two temporary cofferdams across the river to allow for construction of the earthfill dam.
- Two new 500 kilovolt transmission lines connecting Site C to the Peace Canyon Substation, within an existing right-of-way.
- Shoreline protection at Hudson's Hope, including upgrades to DA Thomas Road.
- An 800-metre roller-compacted-concrete buttress to enhance seismic protection.
- An earthfill dam, approximately 1,050 metres long and 60 metres high above the riverbed.
- A generating station with six 183 MW generating units.
- An 83-kilometre-long reservoir that will be, on average, two-to-three times the width of the current river.

1.1 Environmental Assessment Certification Conditions

The <u>Site C Business Participation Plan</u> has been developed in accordance with Conditions 51, 54 and 72 of the Environmental Assessment Certificate (EAC), and supports local and regional business participation in the project. Table 1 describes where in the Business Participation Plan each aspect of the EAC conditions is addressed.

This Business Participation Plan Annual Report provides a review of the activities undertaken in the reporting period, which is July 1, 2020 to June 30, 2021.
